# SCO 5.0.5 Driver Installation

### Introduction

This publication describes how to install the Intelliport II software device drivers for SCO UNIX System V, Release 5.0.5. Before you begin, make sure that the operating system is installed and active on your system, and that you have the correct driver software for your operating system.

## Installation Procedure

Use the following procedure to install the SCO 5.05 drivers:

1. Verify that you are logged in as root. Type *custom* to start the UNIX custom program, as shown in Figure 2.

#### Figure 1. Software Manager Custom Menu

2. Select the *Software / Install New* option from the Main Menu using the right arrow key, then press *Enter*, as shown in Figure 3.

```

#### Figure 7. Selecting Software to Install

6. Select the Number of boards to install in the system (Press F2 for choices).

#### Figure 8. Selecting Number of Controllers

7. Use the *down arrow key* to move the cursor to the **IRQ** selection (Press *F2* for choices). After making your selection, press *F3* to save the form and go to the next screen.

**NOTE:** If you are installing a PCI board, select IRQ 0.

#### Figure 9. Selecting the IRQ

**IMPORTANT**: If you press *F2* and no interrupts are available, stop the installation and call Computone Technical Support at **1-800-241-3946**, **x2002**.

8. Move the cursor to Board Type and press F2.

All boards REQUIRE a unique I/O address range. Use the arrow keys to move about the form.								
Press F3 to save the form and to continue.								
Board	Board Type	I/O addr or Slot #	Max Screens/Terminal					
Board 1		Range 1	2					

#### Figure 10. Setting *Board Type*

**NOTE**: You can get the **Board Type** from the carton the board came in. For example, ISA CEX would be a valid **Board Type**.

- For ISA and Micro Channel controllers, specify the base I/O address that this controller is to use. You must assign a unique base I/O address to each IntelliPort II controller.
- For EISA controllers, specify the slot number that this controller is to use. You must assign a unique slot to each Intelliport II controller.
- For PCI controllers, leave I/O address at default.
- 9. Move the arrow to your selection and press *Enter*.

Figure 12. Selecting Unique I/O Address Range

**11.** Use the *right arrow key* to move the cursor to **Max Screens/Terminal** and press *F2*. Move the selection arrow to select the number of screens per terminal and press Enter. Press F3 to save inputs and to go to the next screen.

Figure 13. Selecting Screens/Terminal

If you specify four or more screens per terminal (one main screen and three or more alternate screens), the installation program prompts you to confirm the number of screens specified. Most terminals support three or less screens.

Number of Screens	Enables IntelliView Main Screen Plus
1	Zero (0) Alternate Screens
2	One (1) Alternate Screen
3	Two (2) Alternate Screens
4	Three (3) Alternate Screens
5	Four (4) Alternate Screens
6	Five (5) Alternate Screens
7	Six (6) Alternate Screens
8	Seven (7) Alternate Screens

 Table 1. Number of Screens Selected

NOTE: To change Max Screens/Terminal later, reinstall the drivers.

**12.** Select the number of ports per box for this board. Press F3 to save form and go to next screen.

**16.** Select Host, then Exit.

#### Figure 18. Exiting the Program

**17.** Type *sync* at the *#* prompt, then press *Enter*.

**18.** Type *shutdown -g* 0 *-y* at the # prompt.

If you did a PNP (Plug aNd Play) and PCI installation, you must check CMOS for availability of IRQ10.
